olieng.me

Full-Stack Engineering Lead with 12 years of experience building high-performance teams and scalable systems. Led major technical migrations across multiple companies, successfully mentoring 20+ engineers to senior levels. Proven track record leading full-stack development with React/Node.js/Python/Go, architecting microservices, and driving platform initiatives. Currently founding CrimeMapX.com while maintaining hands-on technical leadership. Expert at balancing technical excellence with team growth and product delivery.

WORK EXPERIENCE

Usertesting.com - Staff Software Engineer

Jan 2026 - current

Seattle/Remote

Staff-scope IC. I own cross-team work that sits at the seams (frontend, backend, infra, AI) and ship it end-to-end.

- Architecture, backend and infra: lead micro-frontend migrations across multiple repos and orgs, modernize serverless deploy pipelines, ship features on Scala microservices, migrate them to NestJS with agnostic end-to-end tests, and extend Terraform stacks and Datadog monitoring so services are production-ready by default.
- Guild, docs and AI: drive the engineering guild, improve core docs and decision records, and lead AI initiatives around SDD with OpenSpec, agents and skills, token-usage optimization, and step-by-step adoption plans.
- AI / MCP / RAG: co-create an MCP-powered domain assistant using MongoDB Atlas Vector Search to enhance context retrieval, RAG to improve answer quality, Mastra to orchestrate the agent, and a self-indexing loop plus reusable agent rules and skills across repos
- Stack: React, NextJS, TypeScript, NestJS, GraphQL, gRPC, AWS (Lambda, Aurora, MongoDB Atlas with Vector Search, Bedrock), Kafka, Terraform, Helm, ArgoCD, OpenSpec, MCP servers and legacy Angular microfrontends.

90poe.io - Lead Software Engineer

Nov 2022 - Dec 2025

London/Remote

- Architected microservices using Go and Node.js/NestJS with API Gateway pattern, handling 2M+ daily requests with 99.9% uptime. Implemented event-driven architecture with Kafka for asynchronous processing across 15+ services.
- Optimized PostgreSQL database performance through query tuning, connection pooling, and implementing read replicas, reducing average query time from 450ms to 85ms (81% improvement).
- Built internal platform tooling and CLI that reduced deployment time by 60% and standardized service scaffolding across engineering teams.
- Implemented comprehensive observability stack (Datadog, Sentry) with distributed tracing, reducing MTTR by 70% and providing real-time insights into system health.
- Led migration of monolithic services to microservices architecture, improving team autonomy and enabling parallel development across 4 squads.

CrimeMapX.com - Founder

June 2025 - May 2026

Remote

- Built full-stack crime analytics platform with Next.js/React frontend and Python/FastAPI backend. Implemented advanced SSR, ISR, and hydration strategies for optimal SEO and performance. Architected platform processing 500K+ crime records with sub-200ms response times using Supabase (PostgreSQL + pgvector).
- Implemented RAG (Retrieval-Augmented Generation) pipeline with LangChain, integrating OpenAI models and vector similarity search on pgvector extension. Achieved 95% semantic search relevance accuracy across crime incident data.
- Deployed serverless edge functions with Deno for real-time data aggregation, achieving global CDN distribution with <50ms latency across 285+ cities worldwide.

0XA Tech - Principal Staff Software Engineer

Jul 2022 - Nov 2022 (contract)

London/Remote

- Built full-stack Web3 crypto platform with Next.js/React frontend using advanced SSR/hydration for SEO optimization and Node.js/Express backend. Integrated Ethers.js for smart contract interactions and PostgreSQL for off-chain data. Handled 50K+ daily transactions with 99.95% uptime.
- Developed Solidity smart contracts and backend indexing service to sync blockchain events with PostgreSQL database, reducing data query latency by 90% compared to direct on-chain reads.

Casebook PBC - Senior Software Engineer

May 2021 - Jul 2022 (contract)

US/Remote

- Designed and implemented GraphQL BFF (Backend-for-Frontend) using Node.js/TypeScript/Express with CQRS pattern, separating read and write operations. Reduced backend response time by 42% through query optimization and caching strategies.
- Architected PostgreSQL database schema with proper indexing and materialized views, handling complex social services case management data. Implemented connection pooling and query optimization reducing P95 latency from 850ms to 280ms
- Developed Python/Django REST API endpoints for data export and reporting features, integrating with existing Node.js microservices. Improved CSV generation performance by 3x through async processing..

Feedr - Senior Software Engineer

May 2020 - May 2021

London/Remote

- Built Node.js/TypeScript/Express backend with GraphQL API implementing CQRS pattern for office food ordering platform. Separated read-heavy menu queries from write-heavy order commands, improving overall system throughput by 55%.
- Designed PostgreSQL schema with proper relational modeling for restaurants, menus, orders, and user preferences. Implemented Redis caching layer reducing database load by 70% during peak lunch hours (11am-2pm).

Spotahome - Senior JS Engineer

Feb 2019 - Apr 2020

Madrid/Remote

- Architected microservices backend using Node.js/TypeScript/Express with Domain-Driven Design (DDD) principles and Event Sourcing pattern. Implemented event store in MongoDB capturing all domain events for audit trail and temporal queries.
- Built GraphQL BFF layer consolidating 8 microservices, reducing frontend API calls by 65% and improving page load times. Implemented sophisticated caching and query batching strategies.
- Led team of 6 engineers in adopting hexagonal architecture and establishing coding standards. Introduced comprehensive testing pyramid (unit, integration, E2E) achieving 85% code coverage.

KEY ACHIEVEMENTS

- Led 3+ major technical migrations (monolith→microservices at 90poe, React platform at OXA, GraphQL adoption at Feedr) affecting 15+ engineers and improving system scalability by 3x average.
- Mentored 20+ engineers across 6 companies, with 8 mentees promoted to senior roles. Established coding standards, architectural patterns, and review processes that became team foundations.
- Founded and built CrimeMapX.com from concept to production, making all technical decisions on architecture, stack selection, and deployment strategy while maintaining hands-on development.
- Drove full-stack delivery combining technical leadership with product thinking—shaped requirements, architected solutions, and monitored production metrics across React/Node.js/Python/Go stacks.

EDUCATION

Oviedo University - Bachelor's degree, Computer Science

Sep 2008 - Jul 2013

Spain

TECHNICAL SKILLS

- Backend & API: Node.js, Python, Go, TypeScript, FastAPI, Django, NestJS, Express, C#, PHP, Laravel, Microservices, GraphQL, REST, SOAP, PostgreSQL, MongoDB, MySQL, Redis, Kafka, RabbitMQ, Docker, Kubernetes, AWS, Azure, Serverless, Deno, Supabase, CQRS, DDD, Event Sourcing
- Architecture: Platform engineering, testing strategies, CI/CD, observability, cloud infrastructure
- Frontend: React (7+ years), Next.js, Vue.js, TypeScript, Redux, Apollo GraphQL, Tailwind, styled-components, SSR, Hydration, Webpack, Vite
- Quality: Clean code, TDD, Jest, testing-library, Qodana/sonarcloud, code reviews, mentoring, developer experience
